

Cranky is our cutting-edge metal jig supervised by Norihiro Sato. It has every feature that slow-pitch jiggers could dream of. It responds quickly to lie on its side, drops with active and varied movements, and lifts with feather lightness and a sharp followthrough. Cranky works remarkably well for those stubborn fish that are difficult to snag, like range-bound bottom fish or fast swimmers under turbulent currents. With subtle cranks or dips of the rod, make it lie on its side or hover in mid-water with ease. You'll have full command of this jig in the toughest conditions. With Cranky, those evasive fish you've been missing will be on your line!
